Subject: RE: review of Tower remediation recommendations

Tom,

That works. I'd like for us to talk first before we talk to the tribe, and then probably have a call with all of us and Bristol to discuss.

One thing to think about- I have concerns about using AS/SVE with the known iron bacteria problem at the site. If I remember correctly, REI was having to come to the site often when the gw system was in operation and scrape the sludge off the equipment. Do you or someone you know have some experience with this problem and whether it would remove that process from consideration as we look at options?

Thanks.

Hi Bob. I can get them to you next week. Can we touch base on Monday to go over some of my thoughts before putting pen to paper?

Hi Tom,

I hope your field work is moving along well.

Can you give me an idea of when you may be able to review the Bristol recommendations for the Tower Standard site? I want to schedule a date for us to get our comments back to them. I have not yet heard from LDF on when they may be able to get me comments, but proposing a date may help move the process along.

Thank you. And thanks for the input during the modeling session with S2C2.

Regards,

Bob
